

Phase-3: Project Architecture & System Design

Project: Auto Ticket Classification using Flow Designer | Target: u_incident_workflow | Scope: Global

3.1 Data Architecture & Schema Specification (`u\_incident\_workflow`)

A custom application table was designed in the global scope with foreign-key relationships to foundational tables (sys_user, sys_user_group):

Field Label	Database Element	Type	Reference / Source	Purpose
Number	u_number	String (40)	sys_number	Auto-generated ticket ID (Prefix: INC)
Caller	u_caller	Reference	sys_user	Submitter profile link; email recipient
Category	u_choice_2	Choice	Internal Choices	Primary classification: Network, Hardware, Access, Performance
Subcategory	u_choice_3	Choice	Dependent (u_choice_2)	Granular classification dependent on Category
Short Description	u_string_4	String (40)	User Input	Parsing target evaluated by Flow Designer
Description	u_string_5	String (40)	User Input	Detailed user issue description
State	u_choice_6	Choice	Internal Choices	Lifecycle states: New, In Progress, On Hold, Resolved, Closed
Assigned Group	u_reference_7	Reference	sys_user_group	Assignment group routing recipient
Assigned to	u_reference_8	Reference	sys_user	Individual technician assignee

3.2 Choice Dependency Model

Parent Category	Category Value	Dependent Subcategory	Subcategory Value
Network	network	Wi-Fi	wi-fi
Hardware	hardware	Projector	projector
Access	access	Forgot Password	forgot password
Performance	performance	Slow Computer	slow compter

3.3 Flow Designer Decision Logic Blueprint

```
[ Trigger: Record Created on Table 'u_incident_workflow' where Category is Empty ]  
├─> IF Short Description contains 'Wi-Fi' OR 'Network'  
│   └─> Action: Update Record [ Category = Network, Subcategory = Wi-Fi ]  
├─> ELSE IF Short Description contains 'Projector'  
│   └─> Action: Update Record [ Category = Hardware, Subcategory = Projector ]  
├─> ELSE IF Short Description contains 'Forgot password'  
│   └─> Action: Update Record [ Category = Access, Subcategory = Forgot Password ]  
├─> ELSE IF Short Description contains 'Slow computer'  
│   └─> Action: Update Record [ Category = Performance, Subcategory = Slow Computer ]  
└─> Action: Send Email Notification to Trigger -> Caller -> Email  
    └─> Subject: "Your Request for the issue has been submitted."
```
